From Support to Dependency

While online class help services may initially serve as a form of support, overreliance can lead to dependency, which poses several risks:

1. Loss of Skill Development

- **Hindered Learning:** Delegating coursework prevents students from engaging with the material, robbing them of opportunities to develop critical thinking and problem-solving skills.

- **Unpreparedness for the Future:** Without mastering the necessary skills and knowledge, students may struggle in advanced courses or professional settings.

2. Reduced Accountability

- **Avoiding Responsibilities:** Outsourcing academic tasks diminishes students' sense of responsibility and ownership over their education.
- **Erosion of Work Ethic:** Dependency on external help can weaken students' ability to persevere through challenges and complete tasks independently.

3. Ethical and Integrity Issues

- **Erosion of Trust:** The prevalence of these services creates a culture of suspicion, potentially straining relationships between students and educators.

2. Institutional Responses

- **Increased Monitoring:** Institutions are investing in plagiarism detection tools and surveillance systems to identify academic misconduct, which can create a punitive atmosphere.
- **Reevaluation of Assessment Methods:** To combat misuse, educators are shifting toward authentic assessments, such as open-book exams, group projects, and real-world problem-solving tasks.

3. Undermining the Value of Education

- **Devalued Degrees:** If academic dishonesty becomes widespread, the credibility of educational qualifications may be called into question.
- **Shift in Focus:** The emphasis on grades over learning fuels demand for shortcuts, detracting from the intrinsic value of education.

3. Redesigning Education

- **Flexible Learning Options:** Offering part-time, self-paced, or hybrid programs can accommodate diverse student needs, reducing the pressure to seek external help.
